

## **Energy Efficient Evaporation Using Modern Mechanical Vapor Recompression Technology**

## Construction:

- Plate evaporator combined with radial compressor
- Components also available in special materials
- Multiple stages possible (parallel or series)
- May be combined pre-stage for high concentrator or connected in-line after reverse osmosis
- Multiple compressors possible where increased pressure is required
- ATEX version optional

## **Advantages:**

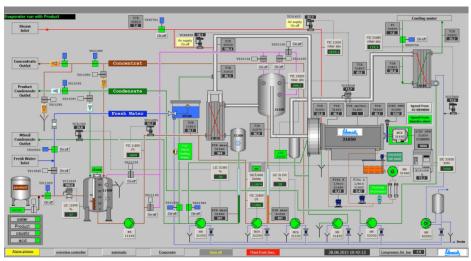

- Reduced operating costs
- Electrical power versus steam
- Compact design
- Evaporating capacity of 1,000-10,000 kg/h
- Fully automated mode of operation
- Cleaning in place (CIP) on hand

## **Utilization:**

- Wash water
- Waste water
- Beverages
- Protein hydrolysate
- Plant extracts
- and more

SIGMASTAR® 90V MVR - Evaporating capacity: 2.000 kg/h
