# **DF Series** – Mobile Air Cooled Copper Tube/Steel Fin with DC or Hydraulic Fan Drive Cooler

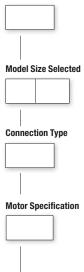

The Mobile DF Series offers the same features as the DH Series with the addition of a low amp draw DC motor or long life hydraulic motor.The robust and rugged design includes steel manifolds, copper tubes, and steel fins. Other features include an optional built-in internal pressure bypass for cold start-up protection and the use of high-low turbulators for optimal heat rejection at lower flow rates. This series is ideal for higher pressure applications. Common applications include oil, fuel and transmission cooling.

For additional sizing information consider using TTP's XSelector<sup>®</sup> online sizing Program.\*

- Based off DH Series with DC fan or hydraulic motor
- Low amp draw 12 or 24 volt DC motor
- Heavy duty construction
- Rugged steel manifolds
- 3/4" copper tube size
- Steel fins
- Long life hydraulic motors
  SAE, NPT, or BSPP connections
- Mounting brackets included

# How to Order

#### **Model Series**

11, 12, 22

(See Performance Curve Chart on page 2 for sizes)

1 - NPT 2 - SAE 3 - BSPP

DF

DFR - With Bypass

4A - 12 VDC 4B - 24 VDC 9 - Hydraulic Motor NM - No Motor

Blank - No Bypass 30 - 30 PSI 60 - PSI

DFR series only. This is a partial flow pressure bypass only. It is not designed to be a full flow system bypass.

#### Ratings

Maximum Operating Pressure 300 PSI

Maximum Operating Temperature 350°F Heat Removal to 35,000 BTU/HR (10 kW)

0124

**Oil Flows** to 110 GPM (240 lpm)

Hydraulic Motor:

Hydraulic Motor Displacement .22in<sup>3</sup>/Rev. Maximum Hydraulic Motor Pressure 2000 PSI Maximum Allowable Hydraulic Motor Back Pressure 1000 PSI

#### **Materials**

Tubes Copper Fins Steel Turbulators Steel Manifolds Steel Fan Assembly High Impact Plastic

#### **Internal Pressure Bypass Options**

### Available in either 30 PSI or 60 PSI settings. Removable for Service

This is a partial flow pressure bypass only. It is not designed to be a full flow system

**DFR-12, DFR-22** 

11/2" external, all steel valve

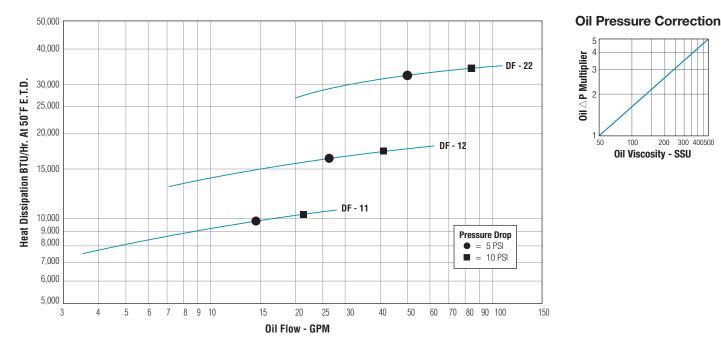

**DFR-11** 3/4" external, all steel valve

# **Performance Curves**

#### For additional sizing information consider using TTP's XSelector® online sizing Program.\*

# **Selection Procedure**

Performance Curves are based on 50 SSU oil entering the cooler 50°F higher than the ambient air temperature used for cooling. This is referred to as a 50°F ETD

- STEP 1 Determine the Heat Load. Heat load may be expressed as either horsepower or BTU/HR To convert horsepower to BTU/HR: BTU/HR = Horsepower x 2545
- STEP 2 Determine Entering Temperature Difference. The entering oil temperature is generally the maximum desired oil temperature. Entering oil temperature – Ambient air temperature = ETD

#### **STEP 3** Determine the Corrected Heat Dissipation to use the curves.

Corrected Heat Dissipation = BTU/HR heat load x $\frac{50^{\circ}F \times CV}{ETD}$	(	Corrected Heat Dissipation =	BTU/HR heat load	Х	50°F x Cv ETD	
---	---	------------------------------	------------------	---	------------------	--

**STEP 4** Enter curves at oil flow through cooler and curve heat dissipation. Any curve above the intersecting point will work.

#### **STEP 5** Determine Oil Pressure Drop from Curves:

• = 5 PSI = 10 PSI Multiply pressure drop from curve by correction factor found in oil  $\triangle$  P correction curve.

#### **Oil Temperature**

Typical operating temperature ranges are: Hydraulic Motor Oil 120°F - 180°F Hydrostatic Drive Oil 160°F - 180°F Engine Lube Oil 180°F - 200°F Automatic Transmission Fluid 200°F - 300°F

#### **Cv Viscosity Correction**

	OIL										
Average Oil Temp °F	<b>SAE 5</b> 110 SSU at 100°F 40 SSU at 210°F	<b>SAE 10</b> 150 SSU at 100°F 43 SSU at 210°F	<b>SAE 20</b> 275 SSU at 100°F 50 SSU at 210°F	<b>SAE 30</b> 500 SSU at 100°F 65 SSU at 210°F	<b>SAE 40</b> 750 SSU at 100°F 75 SSU at 210°F

# Thermostatic Temperature Control Option (DC)

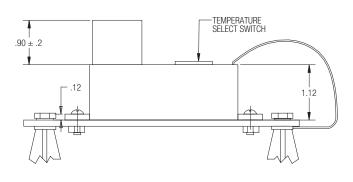

This controller was designed to mount on the cooler without requiring extensive wiring or plumbing. It provides accurate temperature control by cycling the cooling fan(s) to maintain desired oil temperature.

- 12 or 24 volt operation
- Adjustable temperature settings range from 100°F thru 210°F
- For use with one or two fan models two fans need additional relay
- Temperature sensor provided
- Wiring provided for remote manual override
- Mounting hardware included

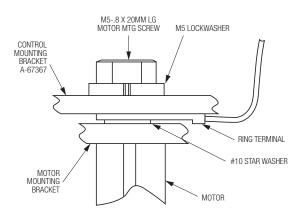

Part Number	Description
96171	Electronic Fan Control Kit
68790	Replacement Control Only
67699	Replacement Sensor Only
