

# Modulating Water Valves and Bulb Wells

**APPLICATION:** These modulating valves regulate the flow of water to the heat exchanger to maintain a desired exiting oil temperature. They open automatically when temperature increases at the sensing bulb. **No** external power source is required to actuate the valve. **Not to be** used for salt water service.

**ADJUSTMENT:** ½" to 1¼" valves can be adjusted with a screwdriver, 1½" and 2" have a ½" square shaft. Turn the adjusting screw clockwise to **decrease** opening temperature; and counterclockwise to **increase** opening temperature. Valves are not calibrated, so final desired temperature setting must be established experimentally. Valve is fully open 36°F above opening point.

Part Number	Water Valves				Bulb Well Recommended Size
	Pipe Size (NPT)	Range (Opening Point)	Sensing Bulb Size Diameter X Length	Maximum Water Flow	
65293	½"	115°F to 180°F	11/16" x 3¼"	25 GPM	65140
65127	¾"	115°F to 180°F	11/16" x 3¼"	40 GPM	65140
65128	1"	115°F to 180°F	11/16" x 6"	55 GPM	65141
65146	1¼"	115°F to 180°F	11/16" x 6"	75 GPM	65141
65511	½"	75°F to 135°F	11/16" x 10"	25 GPM	65380
65253	¾"	75°F to 135°F	11/16" x 10"	40 GPM	65380
65254	1"	75°F to 135°F	11/16" x 16¼"	55 GPM	67438
65255	1¼"	75°F to 135°F	11/16" x 16¼"	75 GPM	67438
66100	1½" ASME	75°F to 135°F	11/16" x 16¼"	90 GPM	67438
67173	2" ASME	75°F to 115°F	11/16" x 43"	150 GPM	67808

Working pressure to 150 PSI Maximum. \*For additional protection of the bulb well stem, use the next longer bulb well.

**65187 Half Coupling** - Mount to Reservoir. For use with all bulb wells shown above.

All stock valves are supplied with a drilled and tapped internal by-pass in the regulator body. A solid plug is installed in this hole for 100% shut-off. A drilled orifice plug is packed in an envelope with each valve for field installation, if continuous minimum flow is required.

# Thermal Bypass Assembly

This thermal bypass valve is ideally suited for hydrostatic drive circuits which require fast warm-up, controlled fluid temperature, and low return line back pressure. When installed in the return line of a hydraulic circuit that employs an oil cooler, this device will modulate fluid temperature by either shifting return line flow through the cooler, or bypassing directly to the reservoir. In addition, a built-in pressure relief function automatically relieves excess pressure to the reservoir should the cooler become restricted and resultant pressure drop become too high for the cooler circuit.

**Standard Shift Temperatures**

100°F (38°C) 120°F (49°C) 140°F (60°C) 160°F (71°C)

**Full Shift (Cooler Port Open) Temperatures**

Shift temperature plus 25°F (14°C)

**Relief Valve Setting** 65 PSI (4.5 BAR) *Consult factory for other pressure settings.*

**Maximum Operating Pressure** 250 PSI (17 BAR)

**Proof Pressure** 300 PSI (21 BAR)

**Minimum Burst Pressure**

Up to the full shift temperature: 325 PSI (22 BAR).

Above the full shift temperature: 600 PSI (41 BAR).

**Minimum Operating Temperature** -30°F (-34°C)

**Maximum Operating Temperature** Shift temperature plus 75°F (24°C)

**Maximum Flow Rating** 60 GPM (227 l/m)

**Leakage @ 250 PSI (17 BAR) and 60 GPM (227 l/m) Inlet Flow**

Cooler Port:

- 0.5 GPM (2 l/m) maximum up to 5°F (3°C) before shift temp.
- 1.0 GPM (4 l/m) maximum from 5°F (3°C) before shift to shift.

Tank Port: 0.10 GPM (0.4 l/m) maximum

**Operating Fluid** Mineral base hydraulic fluids

**Construction** Aluminum die-cast housing

**Operating Characteristics**

- Mode 1: At temperatures below the shift temperature oil flows from inlet to tank port.
- Mode 2: At temperatures between the start of shift and full shift the flow from the inlet port is divided between the cooler and tank ports.
- Mode 3: At temperatures above the full shift temperature inlet flow is through the cooler port.
- Mode 4: At temperatures above the full shift temperature the excess pressure is relieved through the tank port.

**For 120°F Shift Temperature**

NOTE: If the temperature drops below 145°F the valve will shift back to modes 2 or 1.

**Pressure Setting**  
 65 = Standard, 65 PSI  
 Optional pressure settings available in 5 PSI increments, up to 85 PSI.

# Three-Way Thermostatic Valves

## 1/2", 3/4", 1", 1 1/2" & 2" NPT Ports\*

- Self-contained
- Wide range of temperatures
- Rugged construction
- Non-adjustable
- Heavy duty
- Operate in any position
- Tamper-proof
- Replaceable element
- Compact

## Materials

**Housing** Grey iron (steel or bronze optional)  
125 PSI maximum operating pressure

**O-Ring Seals** Viton (Buna N optional)

\*3", 4" and 6" Flange Models also available.

## Operation

TTP thermostatic valves use the principle of expanding wax. A self-contained power element activates a stainless steel sliding valve that provides a positive three-way valve action. All temperature settings are factory set. Elements are field replaceable to obtain the same, or a new bypass temperature setting.

On starting, total flow is in the bypass mode. As the fluid temperature rises, some fluid is diverted to the cooling system. As fluid temperature continues to rise, more flow is diverted until the valve is fully stroked. At this point, all the flow is diverted to the cooler. With respect to temperature ranges, the "nominal" temperature represents the "operating temperature."

Valves are acceptable for oil or water service.

## Applications

Three Way Thermostatic Valves may be installed for either mixing or diverting modes of operation at the preference of the user. They may be mounted in any plane.

When installed as a mixing valve, it is on the cold side of the application, and mixes hot liquid with cooled liquid to discharge the proper temperature fluid to the process.

When installed as a diverting valve, it is on the hot side of the application, and bypasses the cold liquid allowing the system to warm up, then directs the hot liquid to the cooler.

Temperature settings are nominal. 110°F and 140°F are standard. Other settings are available upon request. The valves begin to "shift" (open) about 10°F below the nominal temperature setting and are fully shifted about 10°F above.

Mixing Application

Diverting Application

## Typical Installation

**Hydraulic Power Units** Diverting mode 110°F

**Air Compressors** Mixing mode 140°F

**Mobile Oil Coolers** Diverting mode 110°F

**Radiators** Diverting mode 190°F
